

Sensor Data-Logger Soil EC Surveyor

Measuring and logging soil data is now easier than ever...

Veris Technologies launched on-the-go soil mapping over a decade ago. From the beginning, Veris has produced advanced sensor technology that is simple and user-friendly to operate. These new electronic options continue that tradition, with increased flexibility and features that help assure data quality.

Soil EC Surveyor:

- Attaches to any new or used Veris EC implement
- Measures soil conductivity and sends digital EC values out serial port
- Simple to use: plug and go, data status LED light, large easy-to-read display

Two Choices for Data- Logging:

- **Veris Sensor Data-Logger:** receives serial EC data from Soil EC Surveyor and records on SD memory card. If you like the push-button simplicity of the previous Veris instruments, this is the package for you.

- **Log to a lap-top PC:** view EC and/or pH maps on the go with Veris SoilViewer software. Identify missing or problem data immediately.
