

Q2800 EC System

Dual Depth Soil EC Mapping for ATV's

Veris introduced the world to commercial on-the-go soil mapping over a decade ago, with the dual depth 3100. Soil EC mapping changed the way growers and suppliers view their fields. Now that dual depth capability is available in light-duty system designed for ATV's and UTV's.

- On-the-go soil EC sensing covers your fields with 60-100 direct soil measurements on every acre.
- Spring-steel tine mounted disks follow ground contours and absorb rocks, 15" (38cm) diameter disks provide good soil contact.
- Disk spacing allows mapping in emerged 30-40" (76-102 cm) row crops.
- Uses same electronics as all Veris EC Systems—produces high quality EC maps for 0-10" (25 cm) and 0-30" (75 cm) depths.
- Easily pulled by ATV's and UTV's.
- Scan fields rapidly: 500-1,000 acres/day (200-400 ha) capacity.

Wings fold for loading on trailers and for storage.

Veris EC systems feature user-friendly electronics, require no calibration, and have no electrical interference issues.
